(OT01) **Discovery of 'Z'** **[25 marks]**

You are given a sky map "Map-OT01" along with the question paper. This map shows only stars but no diffuse objects.

Four known stars (S1, S2, S3 and S4), which are present in the map above, are given in the table below with their Common names, Bayer designations and Equatorial coordinates.

Sr. No.	Common Name	Bayer Name	RA	Dec
S1	Alpheratz	α Andromedae	00h 08m 24s	$29°5'16''$
S2	Markab	α Pegasi	23h 04m 46s	$15°12'17''$
S3	Scheat	β Pegasi	23h 03m 47s	$28°4'58''$
S4	Algenib	γ Pegasi	00h 13m 14s	$15°10'59''$

Complete the tasks (OT01.1) and (OT01.2) while you are planning the observations.

(OT01.1) Your first task is to mark these 4 stars (with a circle around each star) and label them as S1, S2, S3 and S4 on the sky map "Map-OT01" provided to you. **6**

(OT01.2) An astronomer has discovered a new diffuse object 'Z' at the following coordinates – RA: 21h 36m 10.6s, Dec: $-26°10'24.4''$ **7**
Mark the position of this diffuse object on the same sky map "Map-OT01" with a $\oplus$ sign and label it as 'Z'. Assume that a linear rectangular grid for equatorial coordinates is valid in the relevant region of the map.

The following task is to be performed once you reach the telescope station.

On the screen diagonally opposite to your station, initially a welcome message, followed by a sample sky (sky unrelated to the question) will be displayed along with a countdown timer. You may use this time to orient the telescope towards the screen and familiarize yourself with other equipment provided at the station. At the end of this time a part of the sky given in the map "Map-OT01" will be projected on the screen for the next 6 minutes. Note that the scale of the projection shown on the screen is different from the actual scale seen in the sky.

(OT01.3) Find the new object 'Z' with the telescope using any appropriate eyepiece. Then centre the object properly in the field of view of the eyepiece with the crosshair, and show it to the examiner at your station. **12**
At the end of 6 minutes, the projection will be blurred for 20 seconds. At this point you must step away from the telescope. The projection will be restored for the examiner to check the view through the telescope. This marks the end of the first task.
